mechanical components

certification

The Company is ISO 9001:2008 certified, and its production process is certified as well according to SEKA-Q.SYSTEM (FPC – Factory Process Control), a certification issued by the Association of the Greek Manufacturers of Aluminum. Furthermore, all its products are certified and tested by Greek and internationally acknowledged institutes, such as the IFT Rosenheim in Germany and the Greek Aluminum Development Center (EKANAL).

sliding

doors & windows

The best sliding system for heavy duty purposes. Ideal for large openings that provide easy sliding even under heavy loads. The multiple locks allow for entirely safe doors and windows thanks to the leading German mechanism HAU TAU.

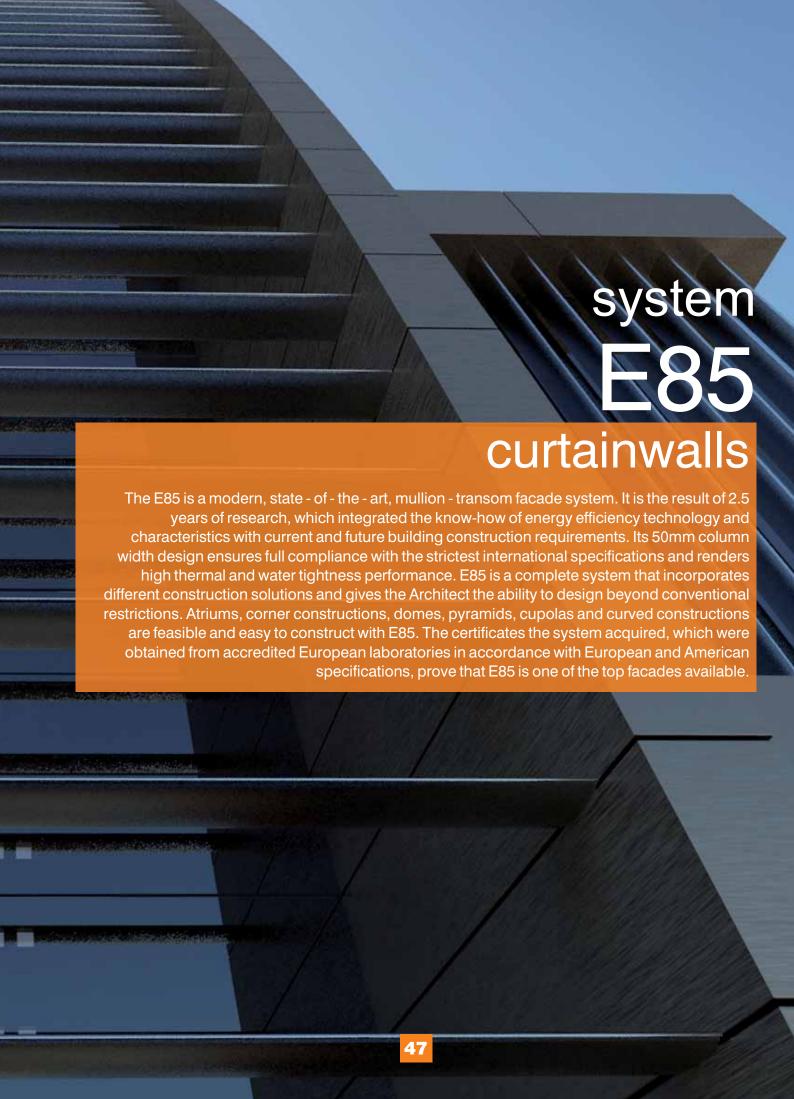

rolling shutters

The rolling shutters of ALKAT-Damanakis cover the entire market's demand. The company covers all types of rolling shutters, from electrical, manual or belts. Their functionality is soundless with high durability even in adverse conditions, and even against wear and tear over time. The electrical rolling shutters are made in cooperation with the German company BECKER, which comprises the largest company of automatic systems for domestic use. Therefore, we offer rolling shutters with HIGHLY INTELLIGENT TORQUE MOTORS, WITH THE DETECTION OF OBSTRUCTION AND SAFE LOCKING. A multiple range of systems with wired or wireless applications, can be offered with remote operation.

slide & tilt

3500 Hybrid system

The 3500 Hybrid system is a tilt vertical slidingsystem, with straight lines design, that covers the trends of modern architecture and it's suitable for indoor ventilation. The sash movement (up and down), is carried out by using the special springs TORSO, which balance the weight of sashes and allow them to remain in any position desired by the user. Also, the special limit arms which take place into the sashes, give the option of tilt in both sashes for cleaning the outside surface of glass.

new louvre system

for windows

Euroline aluminium blinds system is a contemporary proposal of high quality, durability and safety that provides complete sealing and protection. It has built-in window blinds which can be adjusted for air renewal. The handle has the ability to control basic functions of the window giving the option of setting for opening part opening closure thereby establishing the extent of the exposure. All Glass surfaces have a sealant tape on the top for perfect insulation when closed.

security rolling shutters

reinforced rolling shutters with ventilation

Aluminum profile rolling shutters for heavy duty.

The unique structure of the intermediate perforated rod gives a double advantage: greater security against possible burglaries and comfort that can not be achieved with any other system.

The perforated rod renews the air in the environment, adjusts the light or shade, while allowing visibility. Offers great protection and also works as a mosquito screen.

The system does not allow outward extraction. The intermediate rod and join hooks block (4 points) on each rod, is a Patented System. A rolling shutter with 30 rods blocks in 120 points. Guaranteed to withstand burglaries. The blocking is automatic, without the need of chains, padlocks or other security locks.

Visibility

The perforated surface offers visibility while protecting our personal space.

Sun

The new system can be adjusted in order to increase the penetration of ambient light.

Shade

The new system can be adjusted in order to decrease the penetration of ambient light.

Ventilation

The new rolling shutters allow greater ventilation.

Mosquito Screen

The perforated structure prevents insects from entering the house.

Safety

The new system has been tested in simulations with crowbar burglary and rings with positive results. Guaranteed to withstand a pressure of over 100kg.

FOR A PEACE OF MIND OUR PRODUCT IS GUARANTEED FOR 10 YEARS
